

12. Electrical Car Charging Stations on Saskatchewan Highways

Whereas electrical vehicles are becoming increasingly common on Saskatchewan highways;

Whereas replacing gas-fueled vehicles with electrical vehicles will reduce harmful emissions;

Whereas the knowledge that electrical charging stations are available at frequent intervals on Saskatchewan highways will encourage the movement to electrical-powered vehicles;

Be it resolved the SLP work with the private sector to provide electrical charging stations for vehicles at intervals of 100 kilometers on all major highways in the province.
